Not the final design

IBO transactions over time

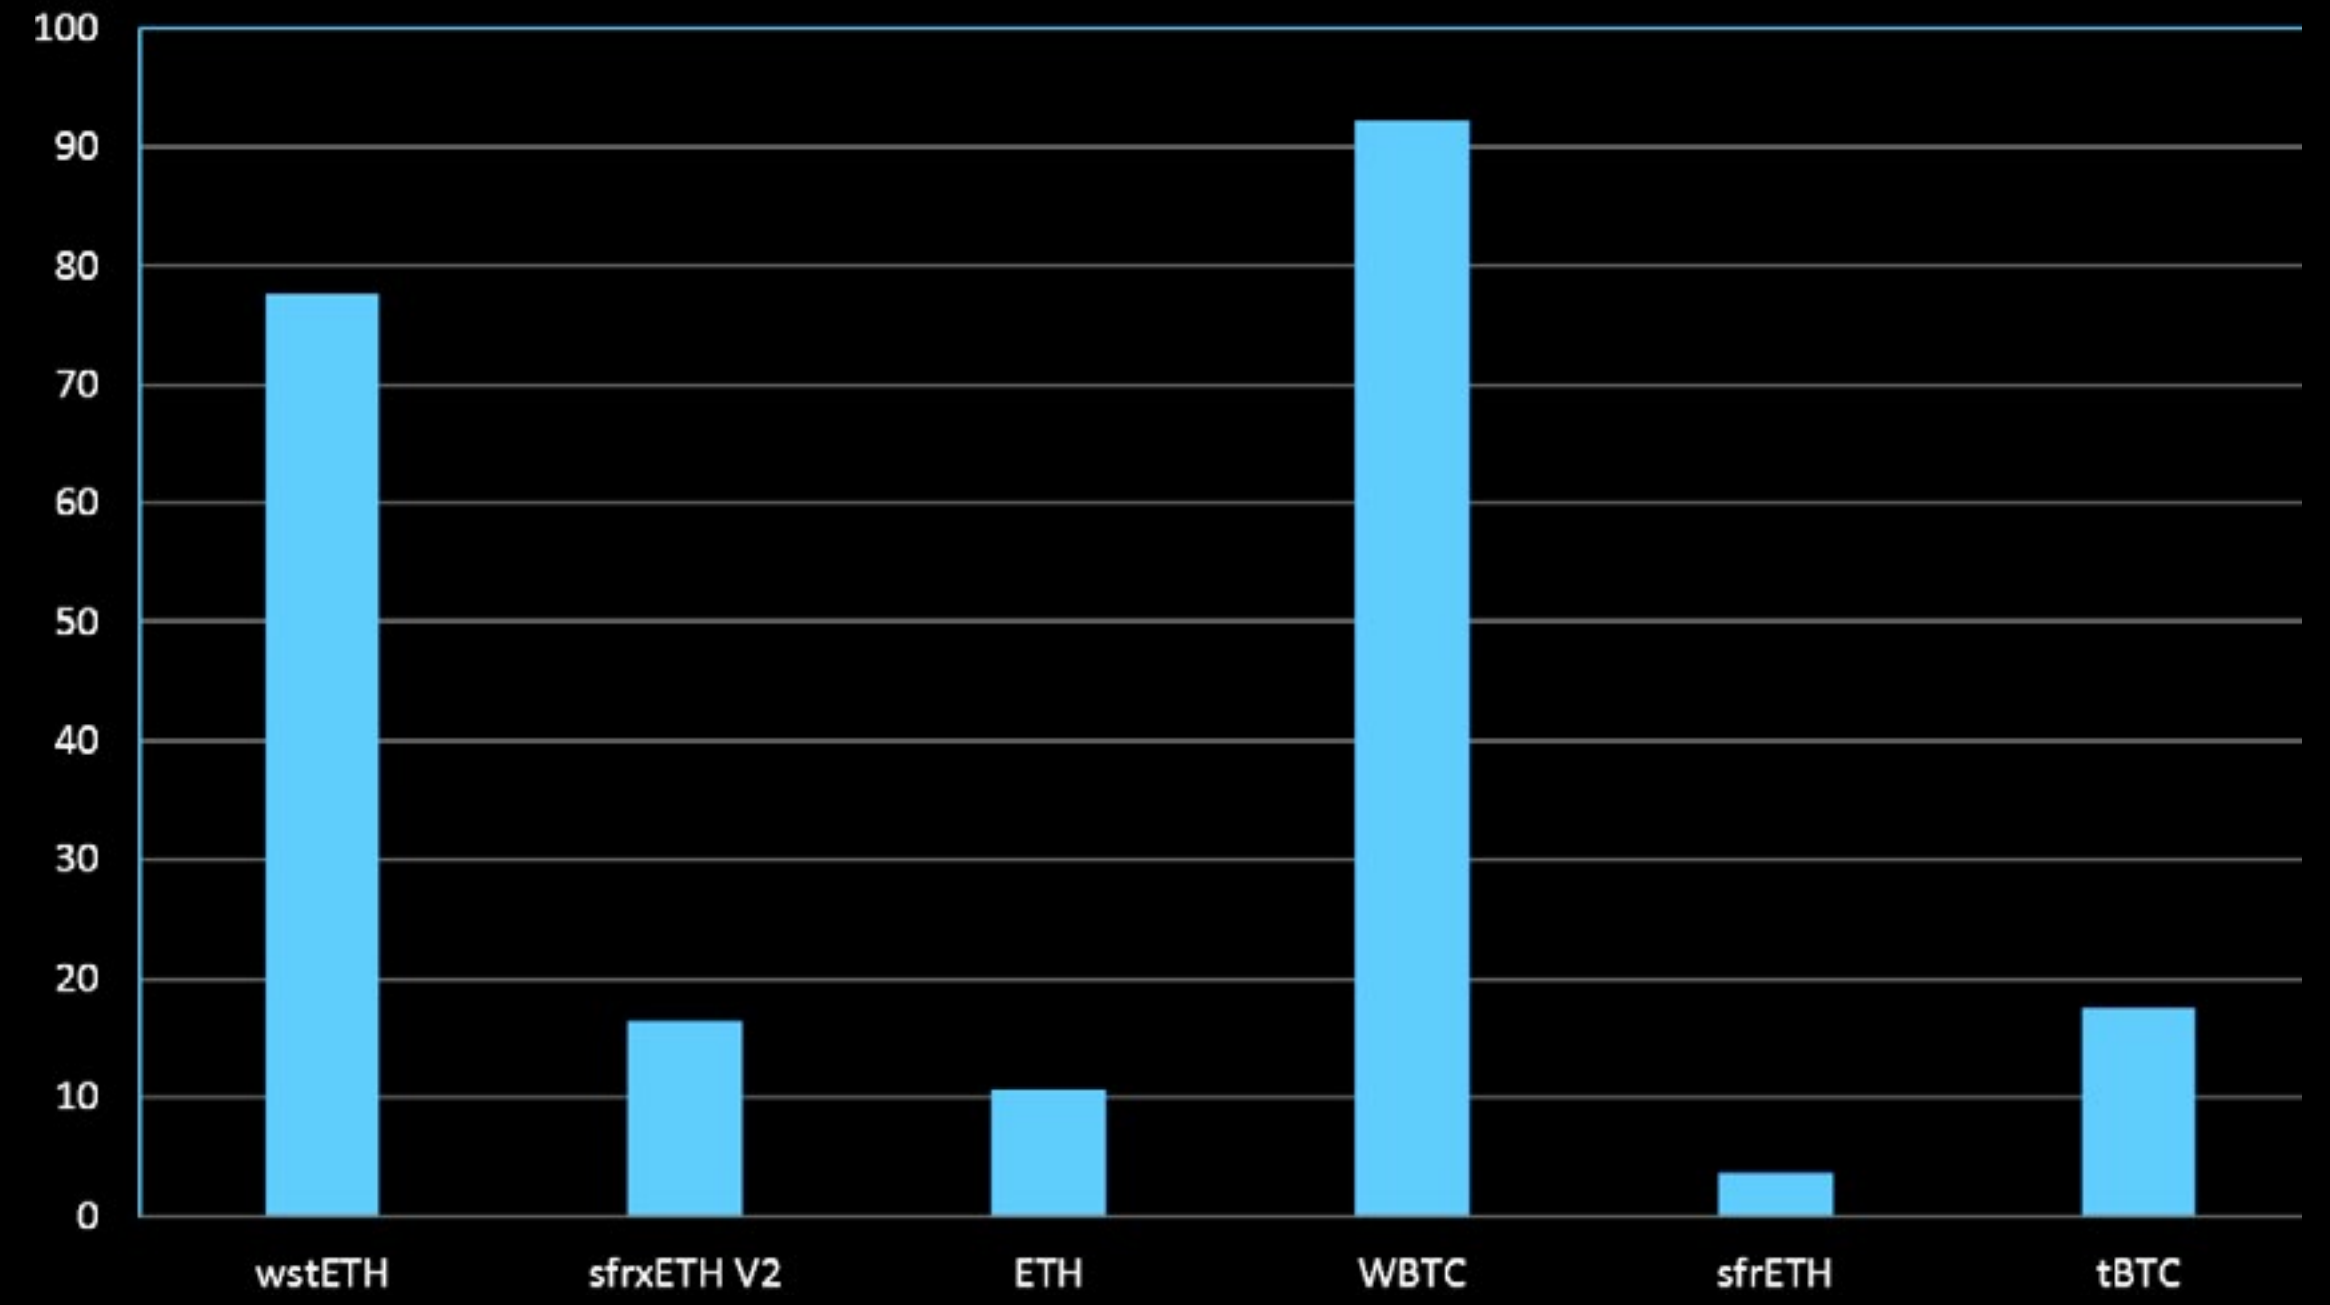

Curve Eco

- A \$9M crvUSD mint against wBTC collateral occurred last week
- Payment in crvUSD is now accepted on LaborX, a crypto friendly microservice app
- Rotkiapp is a reliable investment tracker for your investments on the Curve ecosystem
- A PayPalUSD pool opened on Curve
- Leverage protocol Gearbox released a GIP to open a tripool on Curve

Curve - Total Collateral Value (in M\$)

Game Contest

- The year is 2045, Convergence has finally been launched. Wireshark has just blown out its 92nd candle. We've managed to extract some of the data, including \$CVG holders

Solve this equation to get your hands on an extremely rare artifact of the time: the cvgPepe

"The less obvious number is the APR. The most obvious one is the rate at which the APR progresses each year. The bad number divided by three is the yearly inflation. You have 1,000,000 cvgUSD currently farming on Convergence Corp@

Factoring in the APR, the daily compounding, the APR progression and the yearly inflation, how much cvgUSD will you get after [the young number divided by four] years?"
